DESIGN INNOVATION SOLUTIONS

Garibaldi Glass has over 40 years of glass manufacturing experience and is recognized around the world as a leading producer of yacht-quality marine window glass, interior & exterior glazing and frameless shower enclosures.

Garibaldi Glass is a premier supplier of high performance architectural glass to the glazing industry throughout Canada, the United States and the Pacific Rim. We pride ourselves on working with building owners, architects and construction project managers from conception through completion in order to offer the best glazing solution for each specific application.

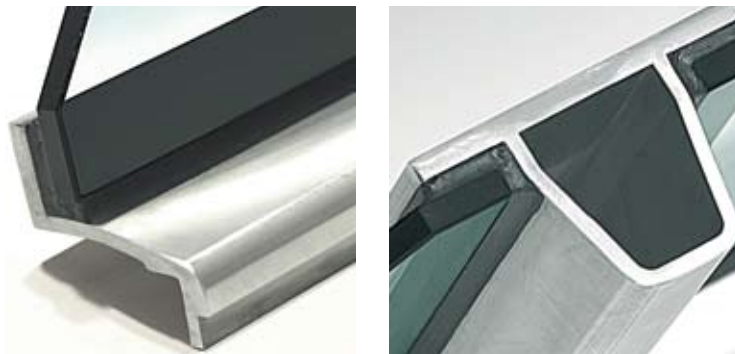

What is FM OceanBond?

The Garibaldi Glass FM OceanBond window system consists of a thermally tempered safety glass or laminated window bonded to the structure of the vessel using a Sikaflex type polyurethane adhesive. These materials are a high-strength elastic adhesive designed to absorb the dynamic stress and thermal movements that are incurred on marine windows. The recess where the glass is bonded is referred to as the flange, which can be composite, aluminum or steel. Garibaldi Glass applies black ceramic coating around the perimeter of the glass which is fired at approximately 1200°F, permanently fusing, both chemically and mechanically to the glass. This coating is referred to as frit. Garibaldi's custom ceramic frit is a high-density formulation specifically manufactured to protect urethane adhesives from damaging UV radiation, while providing an excellent bonding surface.

DESIGN INNOVATION SOLUTIONS

Frameless Bonded Window Benefits

We are setting new industry standards for marine ceramic frit bonded windows. Compared with traditional framed windows, our windows offer greater strength and sound absorption, more design freedoms and the elimination of water leaks. Garibaldi has pioneered the manufacture of double-glazed insulated units for bonded frameless applications. Our double-glazed units insulate against extreme heat and cold, eliminate interior condensation, reduce sound transfer and provide an additional safety barrier against the harsh marine environment.

Customers can expect their orders to be wrapped and crated for safe delivery to any destination worldwide. Currently, Garibaldi's manufacture and delivery time to any North American destination is approximately three weeks.

Garibaldi's windows have been proven aboard hundreds of ships in both new construction and refits, from recreational crafts to military patrol vessels. Our windows will meet or exceed your quality requirements.

FLAWLESS RELIABLE TRUE

"For the past 3 or 4 years Robert Allan Ltd. has been strongly advocating the use of frameless windows on their advanced workboat designs. The benefits of which are a much reduced sightline obstruction and modern aesthetic to the overall appearance. Where visibility is the key to safe and efficient operation, a few inches can make a very large difference. We and our clients are very pleased with the results of these window installations to date, and will continue to use them in as many applications as possible."

Robert Allan P.Eng., President Robert Allan Ltd.

LOS ANGELES FIREBOAT

“The winds were close to 60 knots. The seas were huge. I’ve heard of windshields breaking in such extreme conditions, but the windshields provided by Garibaldi Glass protected us from the powerful waves in what was truly a life-threatening storm.”

Jerry Clark, COO & Production Manager, Northstar Yachts
